Assignment: Group – Project Proposal

ITE 351: AI & Applications

Deadline: Nov. 4, Check LMS for online submission and complete spreadsheet

**Task 1: Report your group members.

Name1, Organization, Email
Name2, Organization, Email
…

**Task 2: Set up your blog space for the final project. This is where you will report your progress and output. Go to the following spreadsheet and report your group members and blog address. Your blog should have the contents of Task 1 and 3 for now.

https://docs.google.com/spreadsheets/d/1hh-InxOVI1kxXfH4IWNJjTSL--wvFuedr7Bjj3_6yPs/edit?usp=sharing

Blog Sites:

https://www.github.com
https://www.medium.com or any other tech blog/blogging sites.

**Task 3: Write your research idea (< 200 words) including the title. It's not your final topic yet.

Title:

Proposal:

Submission: Update the google spreadsheet, convert your blog to PDF, and submit to LMS (one submission per group).

**Possible Topic Proposal? (Option A or B):

When you choose your topic to work on, consider one of the following options:

*Option A: Take a very similar step like Kaggle's Titanic example, you will show us how to investigate the dataset of your choice. You can choose one of the methods from the AI/Machine learning/DL libraries (e.g., https://scikit-learn.org/stable/, R - https://cran.r-project.org/web/views/MachineLearning.html, Any neural network packages, AWS resources https://docs.aws.amazon.com/sagemaker/latest/dg/algos.html https://github.com/aws/amazon-sagemaker-examples, huggingface, keras/pytorch samples, and others). You will show us a step-by-step procedure on how to apply AIML techniques. Accuracy of your method does not matter at this moment.

*Option B: Build a (more of) prototype service using AIML techniques from Option A. The idea is to present AIML related techniques and data analysis in your development steps. AIML + LG appliance is recommended for those taking SE together. We will discuss more later!
